Mesalazine (5-aminosalicylic acid): pharmacokinetics and clinical studies. Mesalazine, a drug originally developed as an antirheumatic agent, has been used as a non-steroidal anti-inflammatory drug for decades. Mesalazine has been found to have a well-documented anti-inflammatory action at both the local and systemic level. Furthermore, its unique mechanism of action makes mesalazine an attractive agent for the treatment of inflammatory bowel disease (IBD). Mesalazine is available in oral form as mesalazine hydrochloride or as mesalazine enema.
