are different methods for this so I can make this into an answer and share it with you. A: Quoted from this link Roms are the best way to update your device, they can fix many of the problems you might be having with the phone. Roms can help to fix problems with your device, but they can also create them. If you have a lot of problems with your phone and you are having issues with getting your phone to respond you should consider having a professional remove and replace the rom if you can't figure out how to fix it. It can also be destructive, so you have to be very careful. It might also make the device incompatible with other data, or it can be a reason why the phone is not functioning at all. So if you are not careful with it, you might be creating more problems for yourself. The best way to proceed for that phone is to ask a professional to install a new rom to see if it helps.
